# MCP (Model Context Protocol)

→ MCP is an open-source standard for connecting AI applications to external systems.

→ Using MCP, AI applications like Claude or ChatGPT can connect to data source (e.g. local files, DB), tools (e.g. search engines) & workflows (e.g. specialized prompts) - enabling them to access key info. and perform tasks.

→ Think of MCP like USB-C port for AI app$^n$. Just as USB-C provides a standardized way to connect electronic devices, MCP provides a standardized way to connect AI app$^n$ to external systems.

⇒ Idea behind protocol:

we will get response in form of JSON (using REST APIs)
